* During Final Defensive Fire, the modifier is 0.5 for the flanked unit firing.

** May only fire during Final Defensive Fire and with these modifiers.

*** The flanked defender in Melee and Final Defensive Fire has a modifier of 0.50. The flanker has a modifier of 1.50.

**** May only defend in Melee and with this modifier.

The Fire and Melee strength modifiers would support the following examples:

1. A target unit in woods on higher elevation than the firing unit would result in modifier of 0.49 (0.7x0.7) in the Fire Phases and the Melee Phases.

2. A target unit flanked by a firing unit in clear terrain would give the firing unit a 1.5 modifier

in the Fire and Melee Phases. In the Fire Phases, the flanked unit would fire with a 1.0 modifier (if it had a target) but would melee with a 0.5 modifier.

3. An artillery unit in woods firing at a unit in woods would receive a 0.49 (0.7x0.7) modifier.

ADDITIONAL MODIFIERS FOR FIRE AND MELEE

Leader Bonus: Direct Modifier. A leader with bonus of 20 would multiply casualties inflicted by the unit it is with by 1.2.

Target Density: For fire combat, 1% more casualties per 50 men when more than 1000 men are in the target square. 1% less casualties when less than 1000 men. Maximum modifier of 1.4.

Density of Firing Unit's Square (Non-artillery): If over 1000 men are firing from the square, a modifier of 1% per 50 men over this number is subtracted from the firing strength (1200 men = .96 modifier). During melee, this modifier is 1% per 100 extra men for an attacking unit (1200 men = .98 modifier).

Fortification Level: The firing unit is penalized by 10% per level that the target is fortified. A fortification level of 5 would give a modifier of 0.5.

Efficiency: Semi-Direct Modifier. For every two points a unit's efficiency is below 100, its strength is reduced by 1%. Example: A unit with 600 men and an efficiency of 60 would have a strength equal to $600 \times .80$ or 480 men.

Fatigue: Semi-Direct Modifier. Strength is reduced by 1% for every 2 points of fatigue. Fatigue of 20 would give a modifier of .90. Example: A unit with 1000 men and 20 fatigue would have an effective strength of $1000 \times .9$ or 900.

Command Control: Direct Modifier. A unit's strength is multiplied by its command control. Example: A unit with 750 men and a command control of 1.3 would have an effective strength of 975.

Artillerymen: Each gun requires 16 artillerymen to fully support it. When artillery fires, it receives a modifier proportionate to the number of men it has to man its guns. A Union artillery unit with six guns would need 96 men to function fully. If it lost 19 men (20%), the unit's strength would be multiplied 0.8 to determine its effective strength (it would be at 80% of full strength).

Random Modifier: 1.0 to 1.2 modified by the level of play.

Unit Outmaneuvered: Firing Unit's strength is cut in half for that attack.

Successful Attack: Firing Unit's strength is increased by 50% for that attack.

Maximum and Minimum Modifiers: All modifiers are cumulative with a maximum of 2.0 and a minimum of 0.2.

All modifiers are cumulative as shown in the example below:

A unit firing under the conditions below would receive the indicated modifiers (all modifiers are multiplied together).

- Firer has 2000 men in square	= 0.80
- Target in light woods	= 0.70
- Target has 3000 men in square	= 1.40
- Firer in column mode	= 0.30
- Firer has 75 efficiency	= 0.87
- Firer has 15 fatigue	= 0.93
- Firer has leader bonus of 15	= 1.15
- Firer has command control of 1.3	= 1.30
- Random modifier is 1.3	= 1.30
TOTAL	0.28

A unit above with 2000 men would fire with a strength of 560. (With rifles at range one, it would kill 22 to 26 men.)

Numbers in parentheses refer to diagonal moves — directions 2, 4, 6, and 8 (1, 3, 7, 9 on the IBM key pad). For the BASIC game, please ignore the numbers and letters printed in blue. ZOC stands for zone of control, which is a war gaming term for the squares next to a unit. P = Prohibited and N/A = Not Applicable.

Notes

- Gunboats pay 1 OP per square.
- Unit 107 (TENN ARM artillery unit with S24 guns) pays triple movement costs (including elevation).
- Column or mounted mode road-to-road movement costs 1 operations point (2 operations points to enter a road in a ravine).
- Operations points to enter Sunken Road in normal or dismounted state are doubled.
- OP costs are doubled during the night turns.
- Retreats and Advances have no OP cost.

- [1] Infantry units must be demibrigades (A and B reorganized) to receive road movement benefits.
- [2] In order to be able to move enemy ZOC to ZOC, a unit must be moving into a friendly occupied square.
- [3] Artillery units cannot change mode in a ravine square.
- [4] Units in woods pay 3 OPs to change into these formations. Units pay 2 extra OPs if in an enemy ZOC.
- [5] Units in woods pay 6 OPs to change into these formations. Units pay 2 extra OPs if in an enemy ZOC.
